

MISYS MANUFACTURING EXTENDED PROFILE

OVERVIEW

MISys Manufacturing was designed to be a sensible alternative to cumbersome and expensive manufacturing management systems. Built specifically for small and mid-sized manufacturers,

The practical manufacturing software supports inventory control, production tracking, and job costing without the overhead of large ERP platforms.

MiSys helps teams manage bills of materials, routings, work orders, and purchasing from a single, structured database to give manufacturers clearer visibility into material usage, labor, and production status.

USE CASES AND INTEGRATION OPTIONS

MISys is frequently used by discrete manufacturers that need strong inventory management and shop-floor control, but do not require the complexity of enterprise-scale systems. It supports make-to-order, make-to-stock, and mixed manufacturing environments.

MISys integrates with [Sage Intacct](#) and other popular accounting platforms, allowing financial data to stay aligned with manufacturing activity while keeping accounting and production workflows distinct. This approach reduces duplicate data entry and supports more reliable costing and reporting.
