

WHEREFOUR ERP EXTENDED PROFILE

OVERVIEW

Wherefour ERP is an intuitive, easy-to-implement manufacturing ERP/traceability system that enables teams to perform batch and lot track/trace, inventory control, formula management, batch and variance costing, customer ordering, and vendor purchasing.

The system's one-click MRP helps users quickly forecast material needs, factoring in lead times, reorder points, and business activity.

AI-ASSISTED COMPLIANCE

Wherefour's compliance tools make QA testing simple. The AI assistant can quickly create clear test definitions whilst keeping approvals, vendor info, photos, and documents all in one place. Metrc users can also store test results for quick searches and inventory safety checks.

INTEGRATION OPTIONS

Inventory, orders, and invoices can be synced across 5,000+ third-party platforms to reduce manual entry, human error, and close books faster. Common integrations include:

- [QuickBooks](#)
- Xero
- Sage Intacct
- [Microsoft Dynamics 365](#)
- Epicor
- Shipstation
- eCommerce platforms including Amazon, Shopify, WooCommerce, and BigCommerce

Wherefour runs on any internet-connected device, including tablets and phones. These devices can also be used to create instant records, stored and backed up continuously with the rest of your data.

PRICING AND VENDOR SUPPORT OPTIONS

Wherefour's pricing is subscription-based, and can be tailored to monthly, quarterly, annual, or multi-year payment (discounts are available for longer-term commitments).

Each account is configured with the required functionality, making it suitable for co-manufacturer/co-packer environments, even across multi-facility or legal entity situations.

Training and data migration services are also available, with various onsite implementation and initial (or ongoing) training methods to choose from

 ☐ Require vendor GUID
 ☐ Allow cost override

The screenshot displays the AWS IoT Greengrass console interface. At the top, a navigation bar includes the AWS logo, a 'Home' button, and a 'Resources' link. Below this is a horizontal menu with icons for 'Provisioning', 'Topology', 'Messaging', 'Connectivity', 'Security', and 'Support'. The main content area is titled 'Control Points' and contains a table with columns for 'Control Points', 'Test Results', 'Documents', 'Control Point Definitions', 'Test Definitions', and a 'New' button. The 'Control Point Definitions' column is currently selected, showing a table with two entries: 'Control Point Definition 1' and 'Control Point Definition 2'. A 'New Test Definition' dialog box is open in the foreground, featuring two tabs: 'Define a test via form' and 'Describe your test to an AI Assistant'. The 'Describe your test to an AI Assistant' tab is active, showing a text input area with a placeholder 'Enter the test you want to create, along with all of its test parameters' and a 'Submit' button. A warning message is displayed above the input area: 'An arithmetic between 0.0 and 0.0, Temperature in Fahrenheit (degF), must be between 32 and 212, 'bottleIsReady' (degF) is not between the two specified values.'
